2024/2025

POWER FOR SUSTAINABLE FUTURE

Joint Stock Company Elektroprivreda Srbije is the largest producer of electricity in Serbia and a reliable supplier to both households and industry. For decades, besides being the backbone of the energy system, EPS has contributed to improving the wellbeing of the community in all areas: health care, development of science, education, culture and sports, as well as through humanitarian activities, support to religious communities and national identity preservation.

Particularly significant aspect in EPS operations is environmental protection, focusing on raising

public awareness about energy efficiency and rational use of electricity.

Elektroprivreda Srbije provides energy security to all citizens of Serbia, participating in corporate social responsibility projects, at the same time serving as a reliable source of support across various aspects of everyday life. In 2025, EPS aided in mitigating the consequences of major fires that occurred in June and July in the cities of Prokuplje, Kruševac, Čačak, Kragujevac and Bor and in the municipalities of Bojnik, Lebane, Ivanjica, Aleksinac, Rača, Knić, Žitorađa, Blace, Kuršumljia, Golubac and Mionica.

Supporting families, children and youth, particularly those without parental care, is an inevitable part of the corporate social responsibility of Elektroprivreda Srbije. One of the forms of such support is the cooperation with SOS Children's Villages Serbia Foundation, as cooperation between EPS and this foundation lasts for an entire decade.

The project for which this foundation is recognized and considered unique is SOS Children's Village Kraljevo – Centre for Family-Based Care for Children Without Parental Care, supported by a network of foster families that provide a family environment to children from across Serbia whose parents were unable to take care of them for whatever reason. The Strong Youth program offers support to young people to continue their education, build self-confidence and become independent. Preventive centres for support are located in nine cities throughout Serbia and from 2013 they have helped more than 1,200 socially vulnerable families with over 2,900 children to stay together. It continues to help young people who grew up in residential care facilities or foster families or socially vulnerable youth in Belgrade and other cities across Serbia.

Children are also at the centre of various activities prioritized

by Elektroprivreda Srbije, especially those related to health, with particular emphasis on the youngest. We recognized the work of the humanitarian organization Friend in Need, which has been helping children with health issues for 15 years, as well as children from Kosovo and Metohija, enabling them to experience the joy of childhood. We have also provided assistance to associations whose members belong to the most vulnerable groups in society, including persons with disabilities and other sensitive categories. We cooperated as well with the association Development Centre for Youth which organized educational and sports camps under the slogan Diversity Unites Us – We Are All Life Champions, for more than 100 children from Kovin, Subotica, Belgrade, Raška and Smederevo who train boxing, karate and football. We additionally supported the work of the association Our Happiness which strives to improve living and working conditions for vulnerable groups in our society, particularly persons with disabilities. EPS also donated funds for the procurement of equipment for the General Hospital in Požarevac to help improve the functioning of this healthcare institution.

RELIABLE SUPPORT FOR YOUTH

SPORTS – SOURCE OF ENERGY

Sports and youth play an important role in corporate social responsibility activities of EPS. We work on promoting and developing sports. The goal is to encourage greater engagement among children and development of sportsmanship and enabling seniors to achieve the best possible results in national and international competitions. Sports are the best way to develop camaraderie and fair play.

We supported and assisted the Paralympic Committee, Volleyball Club TENT Obrenovac, which played in 2024/2025 Champions League and won its first Serbian Cup title, as well as its first Serbian Super Cup trophy. In October 2025, VC TENT won its second Super Cup trophy. We were support to the Bowling Federation of Serbia, as well as to the Handball Federation of Serbia. Women's national handball team of Serbia participated in the World Championship

in Germany and Netherlands, while men's national team represented Serbia at the European Championship. We recognized the importance of Nepal expedition and the ascent of Mount Everest and supported the Expedition Summits Mountaineering Society. EPS continuously recognizes work of local sports clubs in the communities where it operates, and this has proven to be a reliable way of maintaining the sports culture in those areas.

EPS AS RELIABLE SCIENCE PARTNER

The increasing share of renewable energy sources in electricity generation, along with their impact on the power system, sets ever greater demands for the accelerated development of the system itself. In addition to continuously encouraging development, EPS consistently supports professional gatherings and conferences such as the Energy Summit in Trebinje, the Belgrade Energy Forum, the International Hydrogen Usage Conference, the international E Mobility forum, and numerous expert conferences on energy and renewable energy sources. We recognize the importance of the work carried out by experts within the Chamber of Mining and Geological Engineers, and we are proud of our long-standing cooperation with the Archaeological Institute, which is responsible for the research and international promotion of the Viminacium archaeological park

in Kostolac. For decades, we have collaborated with experts from the National Committee of CIGRE Serbia, which brings together specialists from the power sector and other professional organizations.

The latest scientific research is essential for the development of our company, and the institutions involved in these fields have EPS as a committed partner. We provide support to numerous faculties, including the Faculty of Mining and Geology and the Faculty of Mechanical Engineering, assisting them in organizing various panels and symposia. In 2025, we continued to award scholarships to the best students of technical faculties, participated in dual education programs in cooperation with the Serbian Chamber of Commerce, and continued offering professional internships for high school students at EPS production facilities.

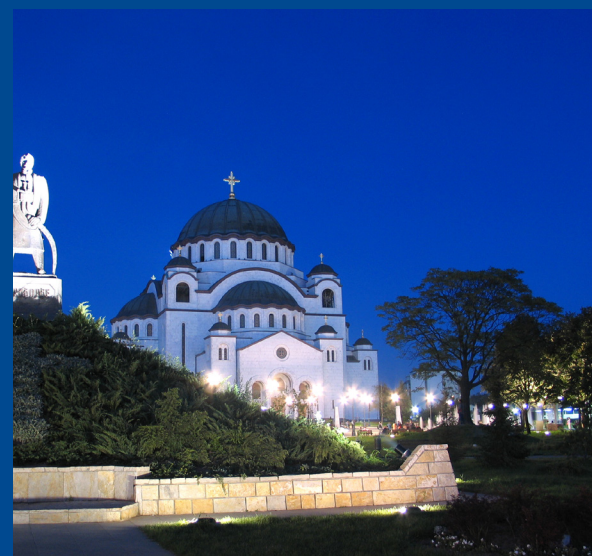

FOR BETTER EDUCATION CONDITIONS

In 2025, EPS continued to support numerous schools across Serbia to improve working conditions, education quality and innovation, as well as to implement the projects and workshops which contribute in creative manner to education and engagement of children in the educational process. We also supported the primary school "20. Oktobar" in Vlasce, near Vranje, for the procurement of

necessary teaching materials and equipment to further advance the development of pupils in this southern Serbian village, as well as the schools "Rudovci" and "Aleksandar I" in Požarevac. EPS also provided significant funds for construction of the primary school "Ljubomir Aćimović" for pupils with developmental disabilities in Obrenovac, which is also an indicator of the strong connection between EPS and local community.

CULTURE, HERITAGE, IDENTITY

Culture and tradition are important for the life of our people and therefore EPS continuously support programs which promote the country and the people who represent its most valuable resource. For this reason, we have supported the Serbian Youth Philharmonic, "Mokranjčevi dani" manifestation in Negotin, the most important mission of which is to promote and preserve the legacy and artistic work of the most prominent Serbian composer Stevan Mokranjac, as well as

"Magična linija" association, the goal of which is to promote Serbian cinematography in the world.

National identity preservation and matters of national importance, also merit the attention of our company. For decades, we have supported and fostered cooperation with numerous churches and monasteries in Serbia, as well as with local cultural centres in communities where production facilities of EPS operate.

SMALL EFFICIENT MEASURES – SUSTAINABLE ENERGY

Enhancing energy efficiency in all domains of life and ensuring rational electricity consumption, along with the increased share of renewable energy sources, are the fundamental pillars of energy transition to which Elektroprivreda Srbije is fully committed. Small changes in daily habits of each of us may help reduce electricity consumption and thus contribute to the preservation of resources and environment. EPS uses a variety

of communication channels to bring energy efficiency measures closer to citizens. At the same time, through its own projects such as the construction of the “Petka” solar power plant and the wind farm in Kostolac, EPS contributes to increasing the RES share in the national energy mix. Moreover, EPS plays an important role in the growing number of prosumers in Serbia, whose capacity has reached 130 megawatts.
